SH11C

MOTORI A CILINDRATA FISSA

FIXED DISPLACEMENT MOTORS

I motori SH11C sono a pistoncini assiali, a corpo inclinato, a cilindrata fissa, progettati per operare sia in circuito chiuso che in circuito aperto. Il distributore a superficie sferica, l'accurata lavorazione e l'alta qualità dei materiali e dei componenti usati, consentono ai motori SH11C di lavorare fino a 430 bar in continuo e di sopportare picchi di 480 bar. Provatissimi in laboratorio e sperimentati sul campo queste unità hanno dimostrato una lunga durata di esercizio con elevati rendimenti. Il supporto dell'albero, realizzato mediante cuscinetti a rotolamento, è dimensionato in modo da sopportare elevati carichi assiali e radiali. La versatilità dei motori SH11C, comprendente vari coperchi, alberi di uscita e valvole flangiabili, consente a queste unità di essere idonee alle diverse tipologie di impianto, sia nel settore mobile che in quello industriale. I motori SH11C sono disponibili in versione ISO e in versione SAE.

SH11C motors are a family of fixed displacement, bent axis piston design for operation in both open and closed circuit. The proven design incorporating the lens shape valve plate, the high quality components and manufacturing techniques make the SH11C motors to be able to provide up to 430 bar [6235 psi] continuous and 480 bar [6960 psi] peak performance. Fully laboratory tested and field proven, these units provide maximum efficiency and longlife. Heavy duty bearings permit high radial and axial loads.

Versatile design includes a variety of port plate, shaft end and valves package that will be fit the SH11C motors to any application both industrial and mobile. SH11C motors are available in both ISO and SAE version.

Fluidi:

Utilizzare fluidi a base minerale con additivi anticorrosione, antiossidanti e antiusura (HL o HM) con viscosità alla temperatura di esercizio di 15 ± 40 cSt. Una viscosità limite di 800 cSt è ammissibile solo per brevi periodi in Condizione di partenza a freddo, per valori superiori contattare Dana Brevini. Non sono ammesse viscosità inferiori ai 10 cSt. Viscosità comprese tra i 10 e i 15 cSt sono tollerate solo in casi eccezionali e per brevi periodi.

Temperature:

Non è ammesso il funzionamento dell'unità a pistoncini con temperature del fluido idraulico superiori a 115°C e inferiori a -25°C . Per applicazioni con temperature inferiori contattare Dana Brevini.

Filtrazione:

Una corretta filtrazione contribuisce a prolungare la durata in esercizio dell'unità a pistoncini. Per un corretto impiego dell'unità a pistoncini la classe di contaminazione massima ammessa è 21/19/16 secondo la ISO 4406:1999.

Pressione di esercizio:

La pressione massima ammissibile sulle bocche in pressione è 430 bar continui e 480 bar di picco. Nel caso di due motori collegati in serie limitare la pressione di esercizio totale $P1+P2$ a 700 bar massimi.

Pressione in carcassa:

La pressione massima ammissibile in carcassa è di 10 bar. Una pressione superiore può compromettere la durata e la funzionalità della guarnizione dell'albero di uscita.

Hydraulic fluids:

Use fluids with mineral oil basis and anticorrosive, antioxidant and wear preventing addition agents (HL or HM). Viscosity range at operating temperature must be of 15 ± 40 cSt. For short periods and upon cold start, a max. viscosity of 800 cSt is allowed, for different types of viscosity please contact Dana Brevini. Viscosities less than 10 cSt are not allowed. A viscosity range of 10 ± 15 cSt is allowed for extreme operating conditions and for short periods only.

Temperature ranges:

The operating temperature of the oil must be within $-25^{\circ}\text{C} \div 115^{\circ}\text{C}$ [$-13^{\circ}\text{F} \div 239^{\circ}\text{F}$]. For applications with lower temperatures please contact Dana Brevini.

Filtering:

A correct filtering is essential for long and satisfactory life of axial piston units. In order to ensure a correct functioning of the unit, the max. permissible contamination class is 21/19/16 according to ISO 4406:1999.

Operating pressure:

The maximum permissible pressure on pressure ports is 430 bar [6235 psi] continuous and 480 bar [6960 psi] peak. If two motors are connected in series, total working pressure $P1+P2$ has to be limited 700 bar max. [10150 psi].

Case drain pressure:

Maximum permissible case drain pressure is 10 bar [145 psi]. A higher pressure can damage the main shaft seal or reduce its life.

Albero di uscita:

La tabella è una guida per la determinazione dei carichi accettabili. I valori sono determinati in modo da garantire una vita almeno pari all'80% della vita dei cuscinetti in assenza di carico esterno. I valori sono riferiti a carichi applicati nella mezziera dell'albero e nella direzione più sfavorevole.

Output shaft:

Table is a guide to determine max. permissible loads. Values are calculated in such a way to assure at least 80% of the bearing operating life where no external load is applied. The published values are related to loads applied in the middle of shaft and in the least favourable direction.

(1)

Massima forza radiale permessa per albero SAI (SH11C 055-063):

$F_{q \max} = 6500 \text{ N}$

Massima forza radiale permessa per albero SAM (SH11C 075-090):

$F_{q \max} = 6500 \text{ N}$

Massima forza radiale permessa per albero SAO (SH11C 108-125):

$F_{q \max} = 6500 \text{ N}$

Massima forza radiale permessa per albero SAP (SH11C 160-180):

$F_{q \max} = 6500 \text{ N}$

(1)

Max permissible radial force with SAI shaft (SH11C 055-063):

$F_{q \max} = 6500 \text{ N}$ [1462.5 lbf]

Max permissible radial force with SAM shaft (SH11C 075-090):

$F_{q \max} = 6500 \text{ N}$ [1462.5 lbf]

Max permissible radial force with SAO shaft (SH11C 108-125):

$F_{q \max} = 6500 \text{ N}$ [1462.5 lbf]

Max permissible radial force with SAP shaft (SH11C 160-180):

$F_{q \max} = 6500 \text{ N}$ [1462.5 lbf]

Quando un carico radiale esterno è applicato all'albero la vita dei cuscinetti è determinata dalla intensità, dalla posizione e dalla direzione della forza applicata. Il diagramma mostra come la vita dei cuscinetti varia con la direzione del carico. Nel diagramma il valore 100% rappresenta la vita dei cuscinetti in assenza di carico esterno. La direzione ottimale del carico dipende dalla bocca dell'unità a pistoni in pressione.

Il diagramma mostra che per determinate direzioni di carico è possibile avere incrementi di durata della vita dei cuscinetti anche del 30%. L'aumento massimo di durata dipende dalla pressione di esercizio e dalla dimensione nominale dell'unità a pistoni.

Nel considerare la forza assiale permessa bisogna fare attenzione alla direzione di trasferimento della forza:

- Carichi assiali spingenti incrementano la vita dei cuscinetti.
- Carichi assiali tiranti riducono la vita dei cuscinetti (se possibile i carichi tiranti devono essere evitati).

When an external side (radial) load is applied to the drive shaft, the bearing life will vary accordingly to the magnitude, location and direction of the load. The diagram shows how the bearing operating life varies versus the direction of the load. In the diagram 100% represents the bearing operating life where no external side load is applied to the drive shaft. The

The bearing operating life increases up to 30% when the load is applied with some peculiar directions and the maximum increase is dependent on the operating pressure and the nominal size of the unit.

When considering the permissible axial force, the force - transfer direction must be taken in account:

- Pushing axial loads increase the bearing life.
- Pulling axial loads reduce the bearing life (if possible pulling axial loads should be avoided).

Guarnizioni:

Le guarnizioni utilizzate sulle unità a pistoni assiali SH11C sono in FKM (Fluoroelastomer). Nel caso di impiego di fluidi speciali contattare Dana Brevini.

Regime minimo di rotazione:

Nessun limite minimo di velocità; se richiesta l'uniformità di rotazione, la velocità minima non può essere minore di 50 rpm. Per applicazioni particolari contattare la Dana Brevini.

Installazione:

I motori possono essere installati in qualsiasi direzione e posizione. Queste unità a pistoni hanno le bocche separate dalla carcassa e devono essere obbligatoriamente drenate. Per maggiori dettagli consultare nel Catalogo Informazioni Generali la sezione "Norme generali di installazione".

Valvole flangiabili:

Le valvole sono disponibili per i motori sia in circuito aperto sia chiuso. Per maggiori informazioni consultare il catalogo Valvole Assiali.

Valvole di lavaggio:

I motori possono essere forniti con la valvola di lavaggio. Per il montaggio diretto della valvola di lavaggio sui motori è necessario utilizzare un coperchio speciale. Per maggiori informazioni consultare il catalogo Valvole Assiali.

Relazione tra senso di rotazione e direzione di flusso:

La relazione tra il senso di rotazione dell'albero dell'unità a pistoni SH11C e la direzione del flusso del fluido è illustrata in figura.

Seals:

Seals used on SH11C series are of FKM (Fluoroelastomer). In case of use of special fluids, contact Dana Brevini.

Minimum rotating speed:

No limit to Minimum speed; if uniformity of rotation is required, speed must not be less than 50 rpm. In case of use of special applications, contact Dana Brevini.

Installation:

SH11C series motors can be installed in every position or direction. These axial piston units have separate ports and drain chambers and so must be always drained. For further details see on the General Information Catalogue, the section "General installation guidelines".

Flangeable valves:

Flangeable valves are available for motors both in open and closed loop. For more information see the catalogue Axial Valves.

Flushing valves:

The motors can be equipped with flushing valves.

The mount the flushing valve on motors, it is necessary to use a special port cover. For more information see the catalogue Axial Valves.

Relation between direction of rotation and direction of flow:

The relation between direction of rotation of shaft and direction of flow in SH11C piston units is shown in the picture below.

SH11C 010-016 MOTORI PER VENTOLE

SH11C 010-016 FAN MOTORS

I motori SH11C 10-16 cc sono comunemente utilizzati in applicazioni con ventola dove è necessaria una valvola di ritegno integrata con funzione anti-cavitazione.

Il motore per ventole può lavorare in sicurezza ad altissima velocità senza problemi di affidabilità grazie alla valvola anti-cavitazione. Quando il flusso verso il motore viene interrotto e il motore ruota ad alta velocità, la valvola anti-cavitazione si aprirà e dirigerà il flusso verso la porta di ingresso del motore. Per eseguire questa funzione, è necessario che sia disponibile una sufficiente pressione di ritorno. Se la pressione di ingresso è insufficiente, si verificherà la cavitazione del motore.

Una contropressione, in un circuito aperto, può essere creata da una valvola di contropressione attraverso la linea verso il serbatoio; se possibile, dovrebbe essere pilotato per minimizzare le perdite di potenza. Nella maggior parte delle applicazioni è sufficiente una contropressione di circa $8 \div 10$ bar.

Codice di ordinazione

Con la valvola anti-cavitazione integrata, è necessario specificare il senso di rotazione del motore al momento dell'ordine del motore.

Tipiche applicazioni

- Scambiatori di calore
- Seminatrici pneumatiche
- Ventilatori

SH11C 10-16 cc motors are common in fan application. Typical need of this application are built-in check valve in anti-cavitation function.

The fan motor can work safely at very high speed without reliability problems thanks to anti-cavitation valve.

When the flow to the motor is shut off and the motor is rotating at high speed, the anti-cavitation valve will open and direct flow to the motor inlet port. To execute this function, it is necessary that sufficient return port back pressure is available. If the inlet pressure is insufficient, motor cavitation will be experienced.

A back pressure, in an open circuit, can be created by a counter pressure valve through the line to the tank; if possible, it should be pilot operated to minimize power losses. A back pressure of about $8 \div 10$ bar is sufficient in most applications.

Ordering code

Due to the built-in anti-cavitation valve, the direction of rotation of the motor must be specified when ordering the motor.

Typical applications

- Head exchangers
- Air seeders
- Blowers

Rotazione oraria Clockwise

Coperchio posteriore VMD
Rear cover VMD

Rotazione antioraria Counterclockwise

Coperchio posteriore VMS
Rear cover VMS

CODICE DI ORDINAZIONE ORDERING CODE

Le seguenti lettere o numeri del codice, sono state sviluppate per identificare tutte le configurazioni possibili dei motori SH11C. Usare il seguente modulo per identificare le caratteristiche desiderate. **Tutte le lettere o numeri del codice devono comparire in fase d'ordine.** Si consiglia di leggere attentamente il catalogo prima di iniziare la compilazione del codice di ordinazione.

The following alphanumeric codes system has been developed to identify all of the configuration options for the SH11C motors. Use the model code below to specify the desired features. **All alphanumeric digits system of the code must be present when ordering.** We advise to carefully read the catalogue before filling the ordering code.

Segnale in uscita versione elettronica
Output signal electronic tachometer

Numero d'impulsi per giro = 14
Principio di funzionamento induttivo
Funzione di uscita PNP
Tensione nominale 10-30 V d.c.
Caricabilità massima 200 mA
Frequenza massima 1500 Hz
Campo di temperatura -25°C +120°C
Grado di protezione IP 67
Versioni disponibili:
• Sensore con cavo a tre fili lunghezza 2 metri

Number of pulses per revolution = 14
Inductive principle
Output current PNP
Voltage 10-30 V d.c.
Max load 200 mA
Max frequency 1500 Hz
Temperature range -25°C +120°C
Enclosure IP 67
Available versions:
• Sensor with 2 metres three wires cable

Il sensore può essere montato solo sull'attacco drenaggio S1.

The sensor can be assembly only S1 drain port.

TAPPI DRENAGGIO INVERTITI DRAIN PLUGS REVERSED

Per la serie SH11C è possibile richiedere la posizione dei tappi del drenaggio invertita rispetto allo Standard.
Se si vuole predisporre in questa configurazione è necessario specificare in fase d'ordine la caratteristica "RD" (vedere punto 13 del codice di ordinazione).

For the SH11C is possible to request the drain plug reversed compared to standard.

If it is necessary in this configuration, to specify in the purchase order the value "RD" (See position 13 of ordering code).
